

## Aerial Scattering of Pet Cremains... starting at \$160

We fully recognize that pets are a part of our family and the loss of a beloved pet is something we take quite seriously. Therefore, we treat the scattering of pet cremated remains with the same dignity and grace as human scatterings.

Our basic rate for this service is for a location within 30 miles of Longview, Texas, and is typically done within 30 days of receipt of the cremated remains (weather conditions permitting). Afterwards, we will provide an attractive certificate commemorating the event, giving the exact date, time, location and altitude of the scattering.

If you wish to witness the scattering from the ground, we can coordinate the timing of this event with you for a modest additional charge (ask us). The same rules and regulations that apply to human scatterings apply to pet scatterings.

### Frequently Asked Questions

#### **Can cremated remains be scattered anywhere?**

Almost anywhere. But there are certain regulations regarding the scattering of cremated remains. Over private property, we must have written permission from either the property owner or the governing agency in charge of the land where the scattering is to occur. We have a selection of pre-approved sites from which to select or we can arrange a custom site with you for an additional fee.

#### **Can I ride along in the airplane?**

Unfortunately, no. First of all, our insurance prohibits accompanied scatterings. Also, regulations allow for only required crew members to be present in the airplane during flight operations.

#### **Can I schedule a time to view the release from the ground?**

Yes, this is available at an additional charge. Please contact us for a special quote.

#### **How will I know the scattering has occurred?**

You will be mailed a certificate that confirms the date, time, and exact location. We can even put your pet's photo on the certificate.

#### **Is aerial scattering of ashes safe for the environment?**

Yes. The Environmental Protection Agency (EPA) determined that aerial scattering of ashes is safe for the environment.

#### **Do you scatter more than one pet's ashes at a time?**

No. We treat each scattering as a solemn, personal event and only one pet's remains are scattered at a time. The only exception would be if a multiple dispersal was specifically requested by the family.

#### **How will you receive the cremated remains?**

You or your veterinarian will deliver the cremated remains to us. If you are in the possession of the cremated remains, you may personally deliver them in authorized packaging to us or send it via U.S. Post Office Registered Mail. FedEx and UPS will not accept cremated remains.

#### **Why Have a Memorial Service by Air?**

We believe that scattering one's ashes by air expresses and represents one's final flight on Planet Earth. The knowledge that one's ashes are forever blowing in the wind is a calming feeling. Just keep in mind that this is a very "final" experience and in no way do we make light of it. We are quite serious about your wishes.

#### **Can we have something read for the scattering?**

Certainly. We will honor whatever it is that you want said or read during the memorial scattering to the letter and word for word. We respect your wishes with total sincerity.

#### **How do you scatter the ashes from your plane?**

We fly to the pre-designated location using a Global Positioning System (GPS) onboard the aircraft. What most people do not understand is that you cannot simply open an aircraft window and disperse cremated remains without them blowing back into the plane. For this purpose, we designed our own unique scattering system that fits into the belly of the aircraft and the pilot releases the cremated remains at the appropriate time.

#### **At what altitude do you dispense the ashes?**

FAA regulations require that the pilot remain a minimum of 500 feet above obstacles, a minimum of 1,000 feet in heavier populated area, and at least 2,000 feet above National Forests.
